FOR SCHOOL IT AND ADMINISTRATORS

Allow SpeechTherapyMagic on your school network

SpeechTherapyMagic is a browser-based speech practice tool that school SLPs use with students. Nothing needs installing, but school web filters sometimes block the site or the games it shows. Everything is HTTPS on port 443; there is no software or browser extension.

Domains to allow

REQUIRED	
`speechtherapymagic.com`	The website and the practice dashboard.
`api.speechtherapymagic.com`	Signing in, saving progress, and pronunciation scoring (recordings are uploaded here).
`cdn.speechtherapymagic.com`	Word pictures, sounds, and game artwork.
`*.speechtherapymagic.com`	Our games. Each one runs from its own play-… address on our domain (for example play-social-scene-creator.speechtherapymagic.com) inside our player.
`fonts.googleapis.com`	Icons and fonts used across the site.
`fonts.gstatic.com`	The font files for the line above.

OPTIONAL	
`accounts.google.com`	Only for staff who use “Continue with Google” to sign in.
`checkout.stripe.com`	Only for paying for a subscription.
`billing.stripe.com`	Only for managing an existing subscription.
`challenges.cloudflare.com`	The security check on our free class and free printable sign-up forms.
`*.ingest.us.sentry.io`	Error reports that help us fix problems. Blocking it changes nothing for users.

Not needed: the analytics and advertising services on our public pages (Google Analytics, PostHog, Meta). They never load on the dashboard. If your filter allows whole domains, `speechtherapymagic.com` plus `*.speechtherapymagic.com` covers the first four entries.

Microphone access

Pronunciation practice records the student saying a word in the browser and sends it to api.speechtherapymagic.com to be scored. On managed devices, grant the microphone ahead of time with the **`AudioCaptureAllowedUrls`** policy. Some hosted games record from inside our player, so add both entries:

```
https://speechtherapymagic.com
https://[*.]speechtherapymagic.com
```

Chrome and Chromebooks (ChromeOS): **`AudioCaptureAllowedUrls`** ("URLs that will be granted access to audio capture devices without prompt"). If **`AudioCaptureAllowed`** is set to Disabled, the microphone works only for sites in that list.

Microsoft Edge (77 and later): the same policy name, under Administrative Templates / Microsoft Edge in Group Policy, or the registry values **`SOFTWARE\Policies\Microsoft\Edge\AudioCaptureAllowedUrls\1`**, **`\2`**.

If your filter blocks us by category

SpeechTherapyMagic is an educational speech-therapy tool: the games are speech practice activities that an SLP assigns. If your filter files speechtherapymagic.com under Games, please add the domains above to your allow list, which overrides the category, or file us under Education.

Privacy summary for administrators

- No analytics or advertising tools run on the signed-in dashboard or on a child's practice links. Our analytics (Google Analytics, PostHog) and the Meta pixel load only on public pages such as the homepage and pricing. Error reports go to Sentry with student identifiers removed.
- Practice recordings are scored by ArticScore, our own pronunciation engine on our own servers, and deleted as soon as the score is returned. By default no recording is stored, and recordings are never sent to a third-party speech-scoring service.
- We do not sell personal information or use children's personal information for behavioral advertising.
- Adults create and manage child profiles, and we ask them to enter a first name or nickname, not a full name. When a profile is deleted, all of that child's data is permanently erased 30 days later.
- SpeechTherapyMagic is a practice tool, not a student-records system: it does not sync rosters or store IEP documents.
- Some of our games are built on Replit. We serve them from our own domain, so a student's device never connects to Replit and Replit does not receive the device's IP address.

Full details, including how long each kind of data is kept: speechtherapymagic.com/privacy, /subprocessors and /dpa.

Questions?

Use the contact form at speechtherapymagic.com/contact (choose "Other") and a person on our team will answer. If a game still doesn't load after you allow these domains, tell us which one. Service status: speechtherapymagic.com/health.

The latest version of this guide is always at **speechtherapymagic.com/for/schools/it**.
